

SIMPLE T-SHIRT DESIGN OPTIONS

Follow the instructions contained in the “Prepping Graphics for T-shirts” button on the Graphics 12 web page.

Probably a good idea to double check with your teacher about whether or not your design will work.

DO NOT use other people’s designs (of course!)

Designs should generally be 12” x 12” to be a full size t-shirt design.

JUST TEXT

Create a design for a shirt that contains only text.

This could be a favourite: Phrase, band, truism, quote, Joke – whatever – easy!

You can type out the text or draw it and scan it, OR you could draw your own text design

LOGO

What about your black and white Logo design? That would be super cool.

Symbols from the Design elements book

POSTERIZED PHOTO

Take a black and white photo (or desaturate a colour photo in Photoshop) that has a lot of contrast (or increase the contrast in Photoshop through levels: command C). subject it to the Posterizing filter. Does it look cool? Make a shirt out of it.

SYMBOL PATTERN

Create a pattern design using the Symbols available from the design elements. Ask your teacher where these are ‘cause I don’t know yet.

There are arrows and asterixis, snowflakes, hearts, targets and lots more! You could make some pretty cool stuff with them.
